# WEST KENYA EXPLORATION TARGETS

Current NI 43-101 inferred resource of 1.2 million oz grading 12.6 g/t

Identified targets for resource expansion

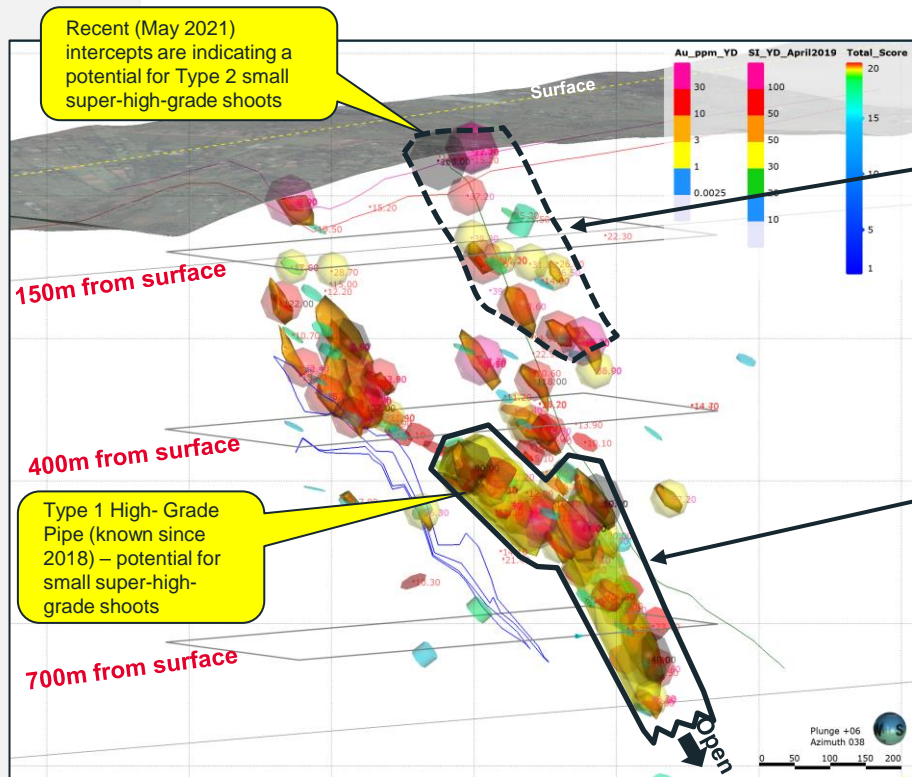

- 1** Small, but very high-grade targets within the known mineralized zones
- 2** Extensional targets
- 3** Proximal early-stage targets

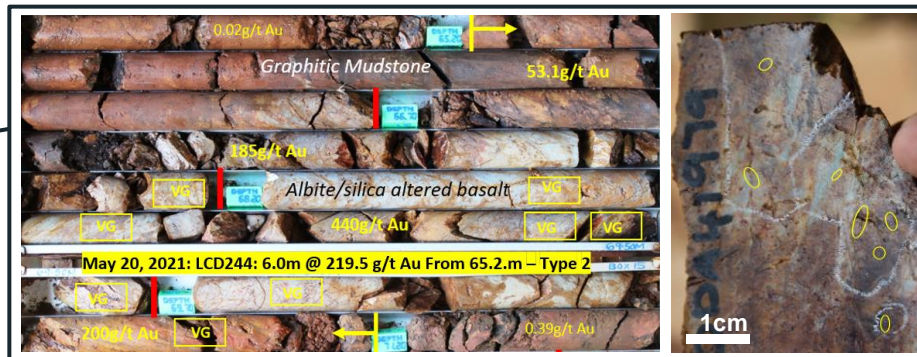

# WEST KENYA: ISULU HIGH GRADE SHOOTS (0-700 METERS)

May 2021 drilling results indicate the Type 2 super high-grade potential is emerging at shallower depths. Visible gold reported continuously across the entire deposit, for more than 700m of the vertical extent

Visible Gold in recent 2021 hole 237 (65m from surface oxide-fresh transition)

Visible Gold in 2021 hole 238 (484m from surface) and in 2018 hole 093 (550m from surface)

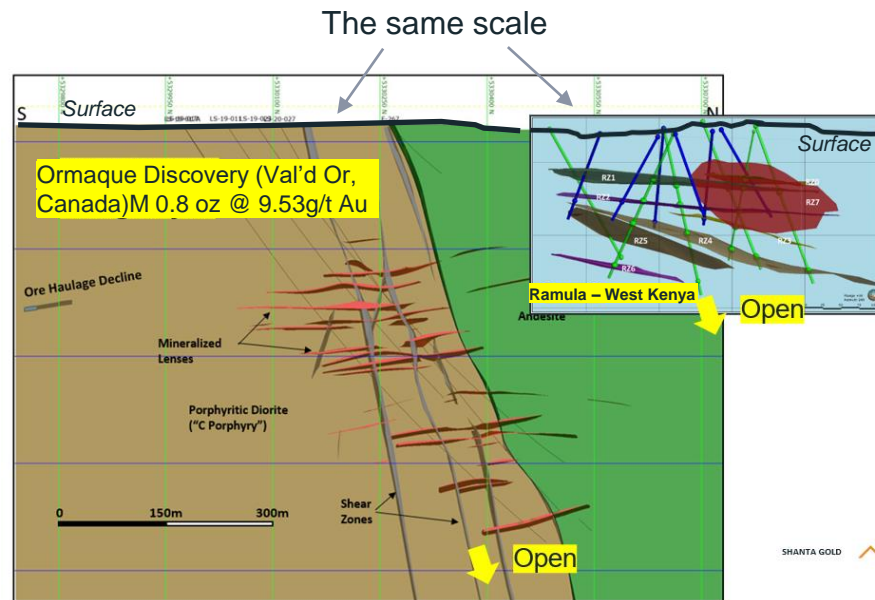

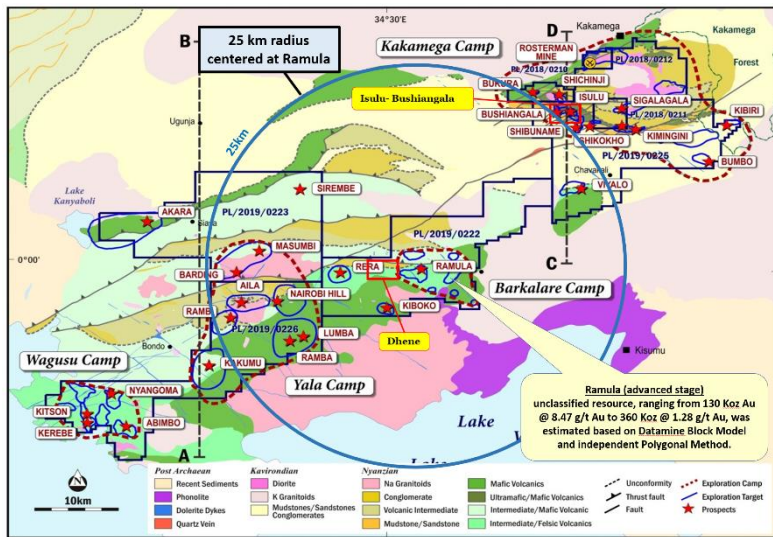

Ongoing 3D modelling of the potential high-grade shoots

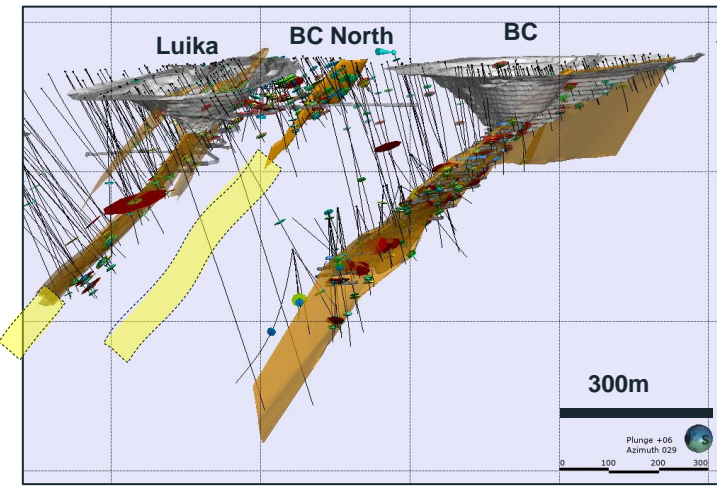

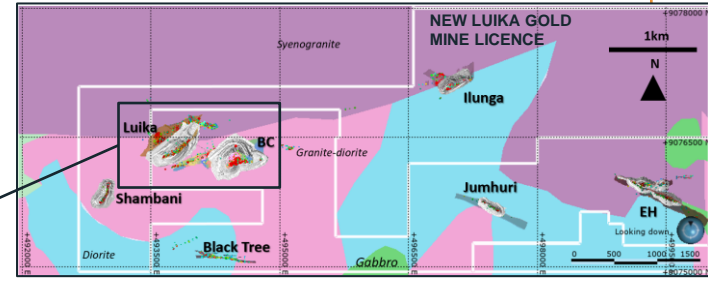

# WEST KENYA REGIONAL TARGETS

A district scale exploration play with parallels to some of the world's great greenstone belts

- Ramula, as well as Rosterman, are highly-prospective, Val'd Or - Sigma-Lamaque style deposits
- Underexplored regional targets across the belt
- Potential for stand-alone deposits similar to Isulu

# NEW LUIKA GOLD MINE: BC AND LUIKA 3D MODELLING

3D view, looking down-along the Nose and E-W faults provides a clue that both BC and Luika have proper extensions over the late displacement Nose Fault; if proven, it opens a significant down-dip potential

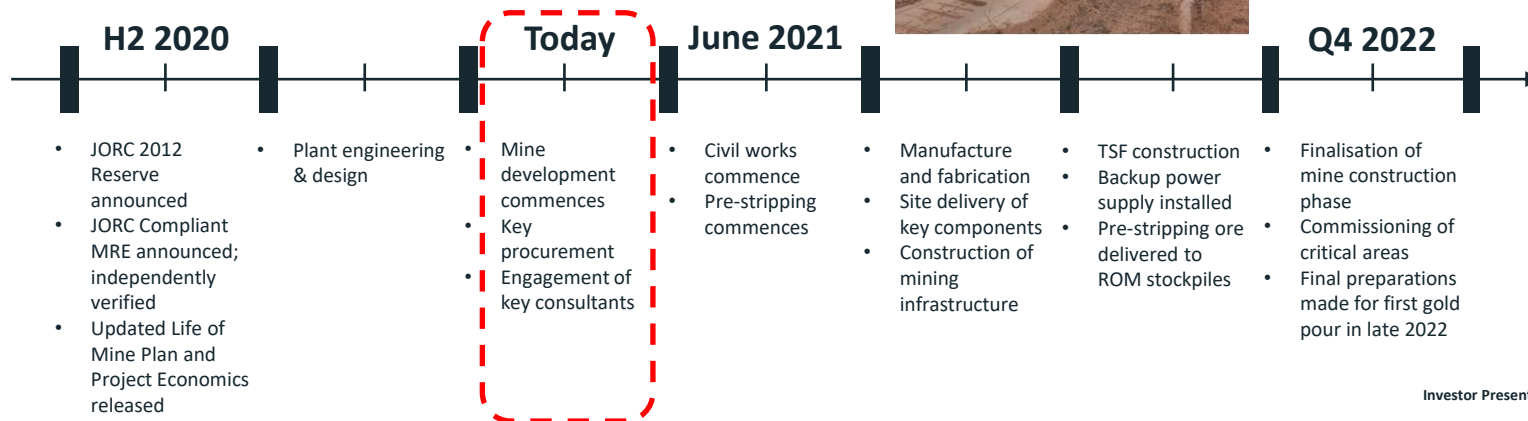

Advanced 3D model, which incorporates not just structural, but also lithological control (previously undeciphered) will generate several down-dip and blind potential targets

Down-dip potential
